

MICROLAB/FXR
A WIRELESS TELECOM GROUP COMPANY

Military and Defense Markets

Microlab has been focused on the Military and Defense Markets since our inception in 1950. In spite of the emergence of Wireless Markets, a significant portion of our commitment and focus remain fixed on the high-reliability products and processes used in military and defense applications.

Microlab is proud to be a part of many of the defense programs that are in-use in the US and Europe today. Our

wave guide dummy loads, low-pass filters, dc-blocks and integrated assemblies are deployed in ship-board radar and ground-based radar. For many years we have been part of the F-14 and F-18, and we have just recently been designed into the Euro-Fighter... When quality and performance are the system drivers, you can count on Microlab to support your application.
